The graph displays the daily count of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, ranging from 0 to 1,000,000. The data shows a general upward trend with significant daily fluctuations. A major peak occurs in early April, reaching nearly 1,000,000 cases.

Date	Number of Cases
Jan 1	~100,000
Jan 15	~200,000
Feb 1	~250,000
Feb 15	~280,000
Mar 1	~400,000
Mar 15	~500,000
Mar 25	~600,000
Apr 1	~950,000

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through mid-February. Starting in late February, there is a significant upward trend, with cases rising sharply to a peak of approximately 100,000 in early March. Following the peak, the number of cases begins to decline, showing a steady decrease through April, with some minor fluctuations, including a small secondary peak in mid-April.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a grid line at 100,000. The data shows a period of relative stability in January, followed by a rapid ascent in late February. A significant peak occurs in early March, reaching nearly 200,000 cases. Following this peak, there is a period of fluctuation with a secondary smaller peak in mid-March, followed by a general downward trend through April, ending at approximately 20,000 cases.

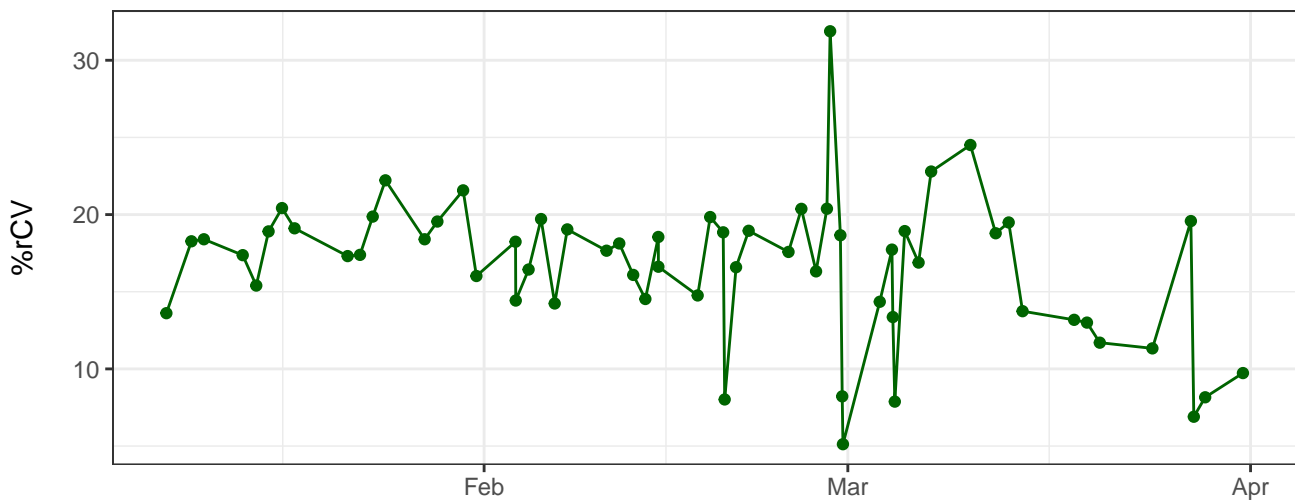

The graph illustrates the daily count of COVID-19 cases in the United States. The y-axis is labeled 'Number of cases' and ranges from 0 to 1,000,000 in increments of 200,000. The x-axis is labeled 'Date' and shows the months of February, March, and April. The data shows a period of relative stability in January, followed by a sharp rise in late February, a peak in early March, and then a decline and subsequent fluctuations through April.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of relative stability with minor fluctuations until late February, followed by a rapid ascent to a peak of approximately 100,000 cases in early March. After the peak, the number of cases begins a steady decline, reaching about 20,000 by mid-April.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of relative stability with minor fluctuations until late February, followed by a rapid ascent to a peak of approximately 100,000 cases in early March. After the peak, there is a significant drop and a period of fluctuation, with cases generally trending downwards towards the end of the period shown.

The graph displays the daily count of new COVID-19 cases in the United States. The data is represented by a dark green line with circular markers at each data point. The x-axis is labeled with the months 'Feb', 'Mar', and 'Apr'. The y-axis has major grid lines at intervals of 20,000, starting from 0 and going up to 100,000. The data shows a period of relative stability with minor fluctuations in January and early February. A major surge begins in late February, peaking in early March at approximately 95,000 cases. This is followed by a sharp drop and then a period of high volatility with several smaller peaks and troughs through April.

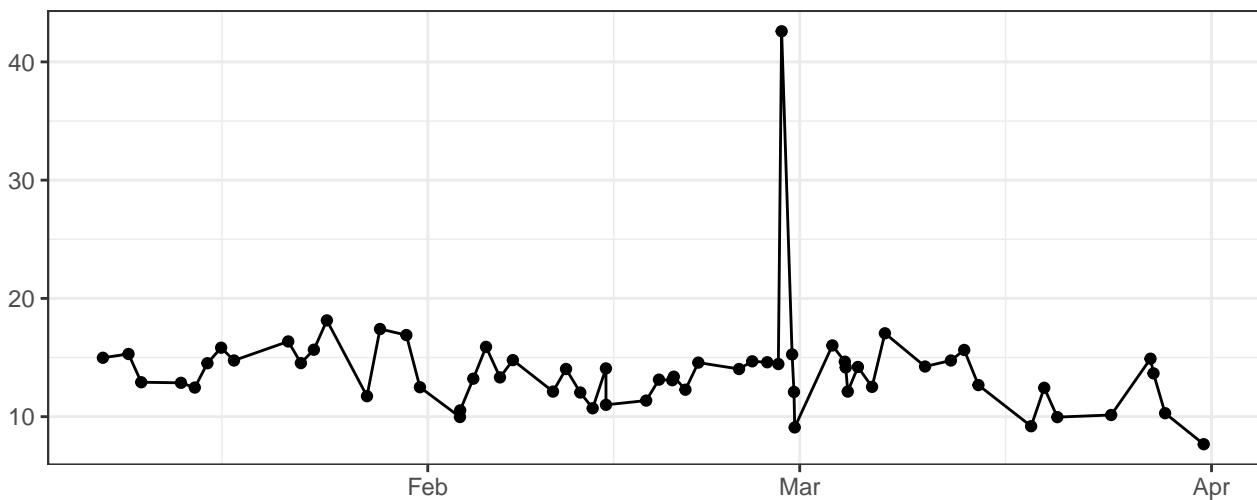

The graph displays the daily count of new COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a grid line at 100. The data shows a period of low activity in early January, followed by a rise in late January and a major peak in late February. After the peak, there is a sharp drop and then a period of fluctuation between 20 and 30 cases per day through March and April.
