The graph displays the daily count of COVID-19 cases in the United States from January 1 to April 1, 2020. The y-axis represents the number of cases, ranging from 0 to 10. The x-axis represents time, with labels for Jan, Feb, Mar, and Apr. The data shows a highly volatile trend with multiple peaks and troughs, indicating significant fluctuations in daily case counts. The highest peak occurs in late March, reaching nearly 10 cases. The lowest point is in early April, dropping to around 3.5 cases.
