The graph displays the daily number of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a general upward trend, with a notable increase in the number of cases starting in late March and peaking in early April at approximately 100,000 cases.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through mid-February. Starting in late February, there is a significant upward trend, with cases rising sharply to a peak of approximately 100,000 in early March. Following the peak, the number of cases begins to decline, showing a downward trend through April, though it remains higher than the initial January period.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of relative stability with minor fluctuations until late February, followed by a rapid ascent to a peak of approximately 100,000 cases in early March. After the peak, the number of cases begins a steady decline, with some minor fluctuations, reaching a level around 20,000 by the end of April.

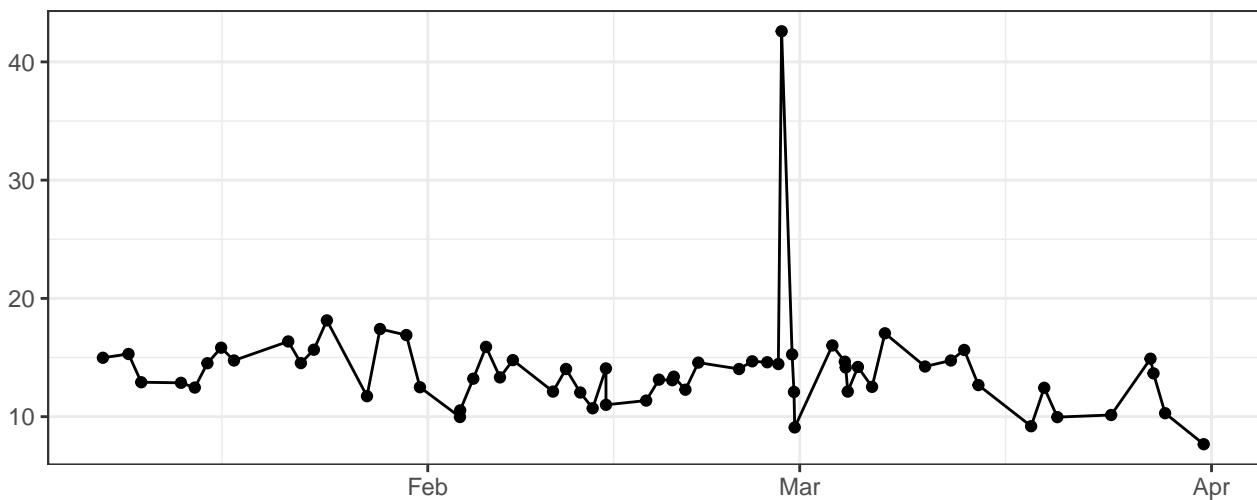

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of relative stability in January, followed by a rapid ascent in late February. A significant peak is observed in early March, reaching nearly 100,000 cases. Following this peak, there is a period of fluctuation with a secondary rise in mid-March, before a general decline begins towards the end of the period shown.

The graph displays the daily count of new COVID-19 cases in the United States. The x-axis represents time from January 1 to April 1, 2020. The y-axis represents the number of cases, with a scale from 0 to 120. The data shows a period of low activity in January, followed by a sharp increase starting in late January, peaking at approximately 105 cases in late February. After the peak, the number of cases drops sharply and remains relatively stable, fluctuating between 20 and 30 cases per day through April.
