The figure is a line plot with blue dots and lines representing daily COVID-19 cases in the United States. The x-axis is labeled with months: Nov, Dec, Jan, Feb, Mar, and Apr. The y-axis has tick marks at 0, 50,000, and 100,000. The data shows a baseline of about 10,000 cases with several sharp drops to near zero in late November, late December, late January, and late March. A massive spike occurs in early April, reaching approximately 95,000 cases.

The graph displays the daily count of COVID-19 cases in the Netherlands. The data shows a pattern of periodic surges. The first major peak occurs in late November/early December 2020, reaching approximately 9,000 cases. This is followed by a period of relative stability with minor fluctuations. A second, even higher peak occurs in late January/early February 2021, reaching nearly 10,000 cases. After another period of low activity, a third major surge begins in late February, peaking in early March 2021 at approximately 9,500 cases. The graph ends in April 2021, showing a slight decline from the previous peak.
