The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a grid line at 100,000. The data shows a period of relative stability around 50,000 cases in January and early February, followed by a sharp rise to over 100,000 cases by early April, and a subsequent decline.

The graph displays the daily number of new COVID-19 cases in the United States. The x-axis represents time from January 1 to April 1, 2020. The y-axis represents the number of cases, with a scale break between 100 and 200. The data shows a period of low case counts (mostly below 50) from January 1 to late February. A sharp increase occurs in late February, with cases peaking at over 200 in early March. This is followed by a period of fluctuating case counts, generally between 50 and 100, until late March. A second, smaller spike occurs in late March/early April, reaching approximately 100 cases per day, before declining again.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of relative stability in January, followed by a rapid ascent in late February. A significant peak is observed in early March, reaching nearly 100,000 cases. This is followed by a period of high volatility with several smaller peaks and troughs, and a general downward trend as the month of April begins.

The graph displays the daily count of new COVID-19 cases in the Netherlands. The vertical axis (y-axis) is labeled 'Nieuw aantal' (New count) and ranges from 0 to 10,000 in increments of 2,000. The horizontal axis (x-axis) is labeled 'Tijd' (Time) and shows the months of Jan, Feb, Mar, and Apr. The data is represented by a dark blue line with circular markers at each data point. The graph shows a highly volatile trend with a significant peak in early March reaching nearly 10,000 cases, followed by a sharp decline and a period of relative stability around 2,000-3,000 cases in April.

The graph displays the daily count of new COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a grid line at 100. The data shows a period of low activity in early January, followed by a rise in late January and a major peak in late February. After the peak, there is a sharp drop and then a period of fluctuation between 20 and 30 cases per day through March and April.
