The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of relative stability with low case counts from November through early December. A vertical dashed red line marks the end of December. Following this, there is a period of low activity until late February. A massive spike occurs in early March, peaking at approximately 95,000 cases. After this peak, the case count drops sharply and then fluctuates at a low level through April.
