The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a major grid line at 100,000. The data points, connected by a line, show a consistent upward trend. Cases remain below 10,000 until late February, then accelerate, crossing 100,000 in early March and peaking at approximately 130,000 in late March before a minor decline in early April.

Month	Autocorrelation Coefficient
Jan	0.000
Feb	0.000
Mar	0.000
Apr	0.000

The chart displays the price of a 10-year Treasury note over a four-month period. The y-axis represents the price in percentage, ranging from 28.700 to 28.775 in increments of 0.005. The x-axis shows the months from January to April. The price remains constant at approximately 28.728% throughout the entire period.

Month	Price (%)
Jan	28.728
Feb	28.728
Mar	28.728
Apr	28.728
