The graph displays the daily number of new COVID-19 cases in the United States from January 1 to April 1, 2020. The x-axis represents time, with labels for Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a grid line at 100. The data shows a period of low case counts (mostly below 25) from January through early February. A significant increase begins in late February, peaking at over 200 cases in early March. This is followed by a sharp decline and then a second, smaller spike in late March, before a general downward trend in April.

The graph displays the daily count of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through early February. Starting in late February, there is a significant and rapid increase in cases, reaching a peak of approximately 100,000 in early March. Following the peak, the number of cases begins to decline, showing a downward trend through April, though with some fluctuations.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 2, 3, 4, 5, and 6. The x-axis is labeled with the months Jan, Feb, Mar, and Apr. The data points are connected by a solid black line. A significant peak is visible in early March, reaching a value above 6. The data shows high volatility throughout the period.
