The graph displays the daily count of COVID-19 cases in the United States from December to April. The x-axis represents time, with labels for Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts in December and January, followed by a significant increase starting in late February. The cases peaked in early March at approximately 100,000, then declined sharply through April.

The graph displays the daily count of COVID-19 cases in the United States from December 1st to April 1st. The y-axis represents the number of cases, ranging from 0 to 250,000 in increments of 50,000. The x-axis shows the months: Dec, Jan, Feb, Mar, and Apr. The data points are connected by a dark green line, with each point marked by a small green circle. The graph shows a period of low case counts in December and January, followed by a sharp increase starting in late January. A major peak occurs in early March, reaching approximately 210,000 cases. After this peak, the case counts decline significantly, with a small secondary peak in late March followed by a final decline towards the end of the period shown.
