The graph displays the monthly evolution of COVID-19 cases in the Île de France region. The y-axis represents the number of cases, with major grid lines at 0, 2,000, 4,000, 6,000, 8,000, and 10,000. The x-axis shows the timeline from January 2020 to January 2021, with labels for Jan 2020, Apr 2020, Jul 2020, and Oct 2020. The data shows a very high peak in early 2020 (around 10,000 cases), followed by a period of relative stability with minor fluctuations between 2,000 and 4,000 cases. A significant resurgence begins in late 2020, with cases rising sharply to another peak of approximately 10,000 in early 2021, before showing a slight decline.

The line graph illustrates the monthly variation of the number of COVID-19 cases in the Republic of Serbia from January 2020 to January 2021. The x-axis represents time, with labels for Jan 2020, Apr 2020, Jul 2020, and Oct 2020. The y-axis represents the number of cases, with a scale from 0 to 100,000. The graph shows a highly volatile trend with several peaks, the highest being in early 2021, reaching nearly 100,000 cases. There are also periods of relative stability and lower case counts, particularly in the middle of 2020.
