The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for January, February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low activity in December and January, followed by a significant surge in late February. The peak occurs in early March at approximately 100,000 cases. Following the peak, there is a period of fluctuation with a secondary rise in mid-March, followed by a general decline towards the end of the period shown in April.

The graph displays the daily count of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through early February. A significant surge begins in late February, reaching a peak of approximately 100,000 cases in early March. Following the peak, the number of cases declines sharply, returning to levels below 10,000 by mid-March and remaining low through April.

The graph displays the daily number of new COVID-19 cases in the United States from December 2019 to April 2020. The x-axis represents time, with labels for Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a grid extending up to 100,000. The data shows a period of low activity in December and January, followed by a significant surge starting in late February. The cases peaked in early March at approximately 100,000, then declined sharply, with a notable dip in late March and a slight recovery in early April.
