The graph illustrates the progression of COVID-19 cases in the Netherlands. The data shows a period of low case counts from December through early March, followed by a rapid increase starting around March 11. The peak of the epidemic occurs in early March, with nearly 10,000 cases reported. Following this peak, the number of cases begins to decline, though it remains significantly higher than the initial period. A second, smaller peak is visible in late March, before the data ends in April.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time from December 2019 to April 2020. The y-axis represents the number of cases, with a scale break between 100 and 1,000. A vertical dashed red line indicates the date of the first confirmed case in the US (January 20, 2020). The data shows a period of low case counts from late January through late February, followed by a rapid increase that peaks in early March at approximately 1,000 cases, and then a decline towards the end of the period shown.
