The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a major grid line at 200,000. The data shows a period of low case counts (mostly below 20,000) from January through early March, followed by a massive spike to over 200,000 cases in early March. After this peak, the case count drops sharply and then fluctuates at a low level until the end of the period shown.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 5, 10, 15, and 20. The x-axis is labeled with months: Jan, Feb, Mar, and Apr. The data points are connected by a solid black line. A significant peak is observed in early March, where the number of cases exceeds 20. Following this peak, the number of cases drops sharply and then fluctuates at a lower level, generally between 5 and 10 cases per day, through the end of the period shown.
