The graph displays the percentage of relative coefficient of variation (%rCV) over time. The x-axis spans from January 2025 to October 2025. The y-axis represents %rCV, ranging from 0 to 12.5. The data points are shown as open circles connected by a magenta line. A red dashed vertical line is positioned at the beginning of January 2025. A red solid square marks the highest peak in the data, which occurs in late September 2025, reaching a value of approximately 12.5. Other notable peaks occur in early January 2025 (approx. 2.5) and early October 2025 (approx. 6.5).

The graph displays the percentage of runs completed within a specified time limit (%rCV) over a period from January 2025 to October 2025. The y-axis represents %rCV, ranging from 0 to 12.5. The x-axis shows time in months. The data is plotted as a magenta line with open circles. There are three vertical red dashed lines at the beginning of January, February, and March 2025. The data shows a generally low %rCV (mostly below 2.5) with several sharp spikes. The highest spike occurs in late July 2025, reaching approximately 12.5. Other notable spikes occur in late September 2025 (reaching ~7.5) and late October 2025 (reaching ~7.5). The data ends in late November 2025.

The graph displays the percentage of relative coefficient of variation (%rCV) over time. The y-axis is labeled '%rCV' and ranges from 0 to 12. The x-axis shows dates from Jan 2025 to Oct 2025. The data is represented by a magenta line with open circles. There are several sharp peaks, with the highest peak reaching approximately 11.5% rCV in late August. A red square marks this peak. Two vertical dashed red lines are positioned at the beginning of the timeline, around Jan 2025.
