The graph displays the daily number of COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through late February. Starting in late February, there is a rapid and significant increase in cases, reaching a peak of approximately 100,000 in early March. Following the peak, the number of cases begins to decline, returning to levels below 10,000 by mid-March and remaining relatively stable through April.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data points are connected by a line, showing a steady increase in cases starting in late February, reaching a peak of approximately 100,000 cases in early March, and then a sharp decline through April.

The graph displays the daily number of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through early February. Starting in late February, there is a significant upward trend, with cases rising sharply to a peak of approximately 100,000 in early March. Following this peak, the number of cases declines sharply, returning to levels below 10,000 by mid-March, and remains relatively stable with minor fluctuations through April.
