The graph displays the daily count of COVID-19 cases in the United States. The data points are connected by a line, showing a period of low activity followed by a rapid ascent to a peak in early April, followed by a precipitous drop. The peak is reached at approximately 100,000 cases, which is the maximum value on the y-axis scale.

The graph displays the daily count of COVID-19 cases in the Netherlands. The x-axis represents time from December 2019 to April 2020. The y-axis represents the number of cases, with a scale from 0 to 1,800. The data shows a period of low activity followed by a significant surge in early March 2020.

The graph displays the daily count of COVID-19 cases in the United States from December 1st to April 1st. The x-axis represents time in months (Dec, Jan, Feb, Mar, Apr), and the y-axis represents the number of cases, ranging from 0 to 100,000. The data shows a period of low case counts in December and January, followed by a significant surge starting in late February. The cases peaked at approximately 100,000 in early March and then began to decline, with a notable drop in late March and a slight recovery in early April.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time from December 2019 to April 2020. The y-axis represents the number of cases, with a scale break between 100 and 1,000. The data shows a period of low case counts (mostly below 100) from December through early February. Starting in late February, there is a rapid and significant increase in cases, reaching a peak of nearly 1,000 cases in early March. Following the peak, the number of cases begins to decline, showing a downward trend through April, though with some daily fluctuations.

The figure is a line plot with green circular markers connected by a green line, showing the daily number of COVID-19 cases in the United States from December to April. The x-axis is labeled with the months: Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a grid extending up to 100,000. The plot shows a sharp spike in cases in early March, reaching nearly 100,000, followed by a rapid decline and a period of relative stability.
