The graph displays the daily count of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for January, February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (below 10,000) from January through early February. Starting in late February, there is a rapid and significant increase in cases, reaching a peak of approximately 100,000 in early March. Following the peak, the number of cases begins to decline, showing a downward trend through April, though with some fluctuations, including a small secondary rise in late March.

The graph displays the daily count of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through mid-February. Starting in late February, there is a significant upward trend, with a major peak of approximately 100,000 cases occurring in early March. Following this peak, the number of cases begins to decline, showing some fluctuations but generally staying below 20,000 by the end of April.

The graph displays the daily count of new COVID-19 cases in the Netherlands. The data shows a period of low activity in January, followed by a gradual increase. A major peak occurs in late February/early March, with daily case counts reaching approximately 950. This is followed by a sharp decline and a period of low activity in April, with daily case counts dropping to near zero.

The graph displays the daily count of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for January, February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through early February. Starting in late February, there is a significant and rapid increase in cases, reaching a peak of approximately 100,000 in early March. Following the peak, the number of cases begins to decline, showing some fluctuations but generally trending downwards towards the end of the period shown.

The graph displays the daily number of COVID-19 cases in the Netherlands from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a scale from 0 to 1000. The data shows a period of low case counts (mostly below 100) from January through mid-February. Starting around February 15, there is a significant upward trend. A major peak occurs in early March, reaching nearly 1000 cases. Following this peak, the number of cases fluctuates but generally declines, returning to levels below 100 by late April.

The graph displays the daily count of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The y-axis is labeled with values 2, 3, 4, 5, and 6, representing the number of cases. The x-axis is labeled with the months Jan, Feb, Mar, and Apr. The data shows a period of low case counts (mostly between 2 and 3) from January through mid-February. A significant spike occurs in early March, reaching a peak of approximately 6.2 cases. Following this peak, the case count drops sharply and then fluctuates between 2.5 and 3.5 cases through April.
