V450-A-% rCV

The line graph displays the daily count of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a grid extending up to 100,000. The data shows a period of low activity in January, followed by a significant surge starting in late February. The cases peaked at approximately 100,000 in early March, then experienced a sharp decline, with a notable dip in mid-March, followed by a secondary, smaller peak in late March, and finally a decline towards the end of the period shown.

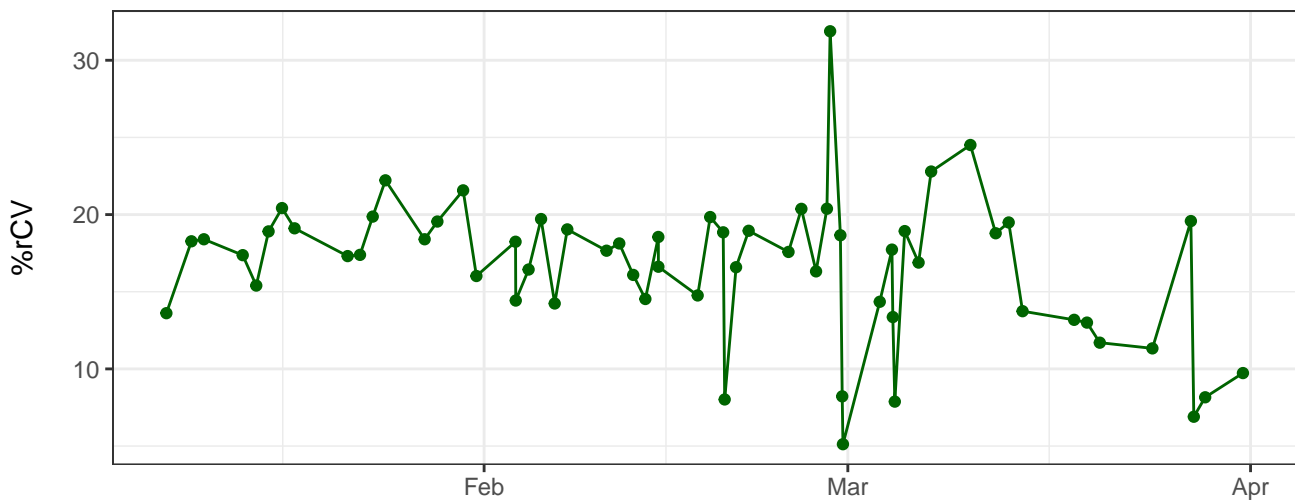

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through mid-February. Starting around February 15th, there is a significant upward trend. A major peak occurs in early March, reaching nearly 100,000 cases. Following this peak, the number of cases begins to decline, showing some fluctuations but generally staying below 20,000 by the end of the period shown.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of relative stability with minor fluctuations until late February, followed by a rapid ascent to a peak of approximately 100,000 cases in early March. After the peak, there is a significant decline, with cases falling back to around 20,000 by mid-March and continuing a downward trend towards the end of the period shown.

The graph displays the daily number of new COVID-19 cases in the United States from January 1 to April 1, 2020. The x-axis represents time, with labels for February and March. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts in January, followed by a sharp increase in late February, peaking at over 100,000 cases. This is followed by a decline and then a second, smaller spike in early March, before a general downward trend in April.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through mid-February. Starting in late February, there is a rapid and significant increase in cases, reaching a peak of approximately 100,000 in early March. Following this peak, the number of cases begins to decline, showing a steady downward trend through April, with some minor fluctuations.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 2, 3, 4, 5, and 6. The x-axis is labeled with the months February, March, and April. The data points are connected by a solid black line. A significant spike is visible in early March, reaching a value above 6. The data shows high volatility with frequent daily fluctuations.
