The graph displays the daily number of new COVID-19 cases in the United States. The x-axis represents time from January 1 to April 1, 2020. The y-axis represents the number of cases, with a scale break between 100 and 1,000. The data shows a period of low case counts (mostly below 100) from January 1 to late February. A sharp spike occurs in late February, with cases exceeding 1,000. This is followed by a decline and then a second, smaller spike in early March, after which the case counts remain relatively low through April 1.

The graph displays the daily number of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through mid-February. Starting in late February, there is a significant upward trend, with cases rising sharply to a peak of approximately 100,000 in early March. Following this peak, the number of cases begins to decline, showing a downward trend through April, though it remains higher than the initial January levels.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 2, 3, 4, 5, and 6. The x-axis is labeled with the months February, March, and April. The data points are connected by a solid black line. A significant peak is observed in early March, reaching a value above 6. The data shows high volatility with frequent daily fluctuations.
