The graph displays the daily count of COVID-19 cases in the United States from December 1st to April 1st. The x-axis represents time in months (Dec, Jan, Feb, Mar, Apr), and the y-axis represents the number of cases, ranging from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from December through early February. Starting in late February, there is a significant and rapid increase in cases, reaching a peak of approximately 100,000 in early March. Following the peak, the number of cases begins to decline, showing some fluctuations but generally trending downwards towards the end of the period shown.

The graph displays the daily count of COVID-19 cases in the United States from December 1st to April 1st. The y-axis represents the number of cases, ranging from 0 to 120,000 in increments of 20,000. The x-axis shows the months: Dec, Jan, Feb, Mar, and Apr. The data points are connected by a blue line, showing a general upward trend with significant fluctuations. A major peak occurs in early March, reaching approximately 110,000 cases. Following this peak, the case count drops sharply and then fluctuates between 20,000 and 40,000 cases through April.
