The graph displays the daily number of COVID-19 cases in the United States from December to April. The x-axis represents time, with labels for Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a grid extending up to 100,000. A vertical dashed red line is positioned at approximately December 15th. The data shows a significant peak in cases around January 5th, reaching nearly 100,000. Following this peak, the number of cases declines sharply, with a notable dip in early February, and then remains relatively stable, fluctuating between 10,000 and 20,000 cases through April.

Month	Day (approx.)	Cases (approx.)
Nov	25	4.5
Dec	5	6.5
Dec	10	8.0
Dec	15	10.5
Dec	20	12.0
Dec	25	10.0
Dec	30	6.0
Jan	5	3.0
Jan	10	3.5
Jan	15	2.5
Jan	20	3.5
Jan	25	2.0
Jan	30	2.0
Feb	5	2.5

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 7.5, 10.0, 12.5, and 15.0. The x-axis is labeled with months: Dec, Jan, Feb, Mar, and Apr. A vertical dashed red line is positioned at the beginning of January. The data points are connected by a solid black line. The number of cases starts around 12.5 in late December, drops to 10.0, then rises to a peak of nearly 14.0 in early January. After the red line, cases drop sharply to around 7.0, fluctuate slightly, and then begin a steady climb starting in late January. A major peak occurs in early February, reaching 15.0 cases. This is followed by a period of relative stability around 7.5 cases, another sharp spike to 15.0 cases in early March, and then a decline towards the end of the period shown.
