The graph displays the percentage of relative coefficient of variation (%rCV) over time. The x-axis spans from January 2025 to October 2025. The y-axis represents %rCV, ranging from 0 to 12.5. The data points are shown as open circles connected by a magenta line. A red dashed vertical line is positioned at the beginning of January 2025. A red solid square marks the highest peak in the data, which occurs around August 2025, reaching a value of approximately 12.5. Other notable peaks occur around October 2025 (approx. 6.5) and late 2025 (approx. 3.5).

The graph displays the percentage of runs completed within a specified time limit (%rCV) over a period from January 2025 to October 2025. The y-axis represents %rCV, ranging from 0 to 12.5. The x-axis shows time in months. The data is plotted as a magenta line with open circles. There are three vertical red dashed lines at the beginning of January, February, and March 2025. The data shows a generally low %rCV (mostly below 2.5) with several sharp spikes. The highest spike occurs in late July 2025, reaching approximately 12.5. Other notable spikes occur in late September 2025 (around 7.5) and late October 2025 (around 7.5). The data ends in late October 2025.

The graph displays the percentage of replicates with a coefficient of variation greater than 10% (%rCV) over time. The y-axis is labeled '%rCV' and ranges from 0 to 12. The x-axis shows time from Jan 2025 to Oct 2025. The data is represented by a magenta line with open circles at each data point. Several peaks are marked with red squares, indicating specific events or conditions. Two vertical dashed red lines are present at the beginning of Jan 2025.
