The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of low activity from December through late February, followed by a rapid ascent to a peak of nearly 100,000 cases in early April. A subsequent sharp decline is visible in late April.

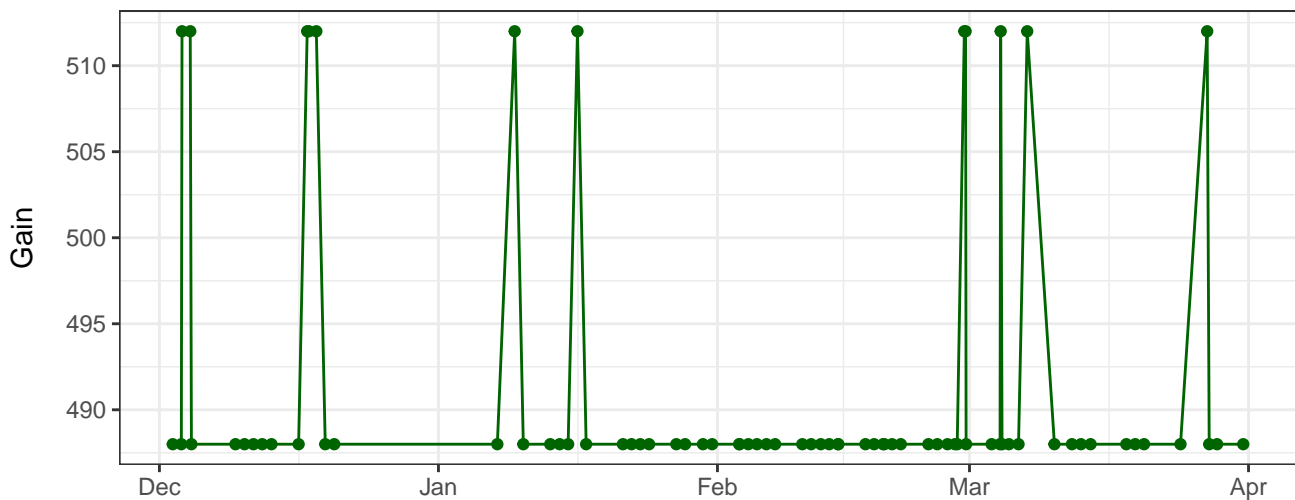

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time from December 2019 to April 2020. The y-axis represents the number of cases, with a scale break between 100 and 100,000. The data shows a period of low activity followed by a major surge in early March 2020.

The graph displays the daily count of COVID-19 cases in the United States from December to April. The x-axis represents time, with labels for Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts in December and January, followed by a significant rise starting in late February. A major peak occurs in early March, reaching nearly 100,000 cases. After this peak, the number of cases declines sharply, returning to low levels by April.

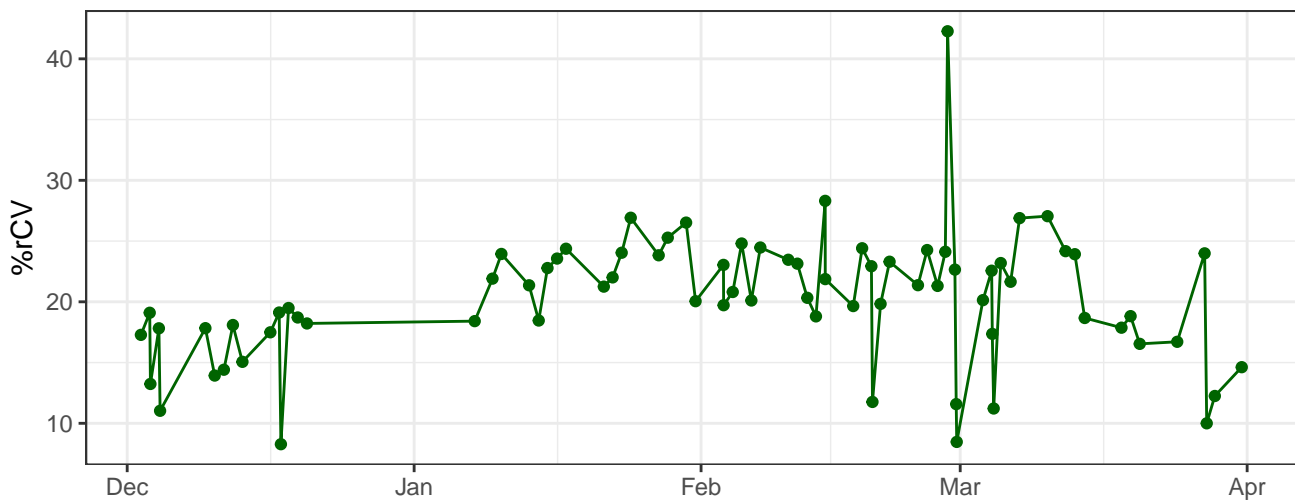

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time from December 2019 to April 2020. The y-axis represents the number of cases, with a scale break between 100 and 1,000. The data shows a period of low case counts (mostly below 100) from December through early February. Starting in late February, there is a rapid and significant increase in cases, reaching a peak of nearly 1,000 cases in early March. Following the peak, the number of cases begins to decline, showing a downward trend through April, though with some daily fluctuations.

The line plot displays the daily count of COVID-19 cases in the United States from December to April. The x-axis is labeled with the months: Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a grid line at 100,000. The data shows a very low and stable number of cases (near zero) from December through February. In early March, there is a dramatic spike, with the number of cases reaching approximately 100,000. Following this peak, the number of cases drops sharply and remains relatively low and stable through April.
