The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for January, February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low activity in December and January, followed by a significant rise in late February. A major peak occurs in early March, reaching nearly 100,000 cases, before a decline begins in mid-March, with a slight uptick in late March and a final drop in early April.

Date	Number of Cases
Dec 20, 2019	15,000

The graph displays the daily count of COVID-19 cases in the United States from January 1, 2020, to April 1, 2020. The x-axis represents time, with labels for Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through early February. Starting in late February, there is a significant and rapid increase in cases, reaching a peak of approximately 100,000 in early March. Following the peak, the number of cases begins to decline, showing some fluctuations, but generally trending downwards towards the end of the period shown.

The graph displays the daily number of new COVID-19 cases in the United States from December 2019 to April 2020. The x-axis represents time, with labels for Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from December through early February. Starting in late February, there is a significant and rapid increase in daily cases, reaching a peak of approximately 100,000 cases in early March. Following this peak, the number of daily cases begins to decline, showing a downward trend through April, though it remains higher than the initial period of the outbreak.
