The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low case counts (mostly below 10,000) from January through mid-February. Starting around February 15th, there is a significant upward trend. The number of cases rises sharply, reaching a peak of approximately 100,000 in early April. Following the peak, the case count begins to decline, showing a downward trend through the end of the period shown.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of relative stability with minor fluctuations until late February, followed by a rapid ascent to a peak of approximately 100,000 cases in early March. After the peak, the number of cases begins a steady decline, with some minor fluctuations, reaching a level around 20,000 by the end of April.

The graph displays the daily count of new COVID-19 cases in the United States. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a grid line at 100. The data shows a period of low case counts (mostly below 50) from early January to mid-February. A sharp increase begins in late February, peaking at over 200 cases in late March. Following this peak, there is a rapid decline, with cases falling back to around 50 by early April, and then a slight uptick towards the end of the month.

The graph displays the daily number of new COVID-19 cases in the United States from January 1 to April 1, 2020. The x-axis represents time, with labels for February, March, and April. The y-axis represents the number of cases, with a scale from 0 to 200. The data shows a period of low case counts in January, followed by a sharp increase in early February, peaking at approximately 200 cases in early March. After this peak, the number of cases drops significantly and remains relatively low through April.
