The graph displays the daily number of COVID-19 cases in the United States from December 1, 2019, to April 1, 2020. The x-axis represents time, with labels for Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of cases, with a scale from 0 to 120,000. A vertical red dashed line is positioned at approximately December 15, 2019. The data shows a period of low case counts (below 10,000) from December 1 to mid-February. A massive spike occurs in early March, peaking at approximately 110,000 cases. Following this peak, the case count drops sharply and remains relatively stable, fluctuating between 5,000 and 10,000 cases through April.

Date	Number of Cases (Approximate)
Dec 1, 2019	5,000
Dec 15, 2019	8,000
Jan 1, 2020	5,000
Feb 1, 2020	8,000
Mar 1, 2020	110,000
Apr 1, 2020	10,000

The graph illustrates the progression of COVID-19 cases in the Netherlands. The first wave peaks in late November at approximately 14 cases. A red dashed line indicates the onset of the second wave in early December. This wave shows a sharp increase, peaking at over 20 cases in early March, before declining and stabilizing around 7-8 cases by April.
