A scatter plot showing the number of deaths per day from COVID-19 in the United States from December 2019 to April 2020. The x-axis represents time, with labels for Dec, Jan, Feb, Mar, and Apr. The y-axis represents the number of deaths, with a grid line at 100. A vertical dashed red line is positioned at the end of December 2019. Data points are black dots. There are two dots at the end of December, one dot at the end of January, two dots at the end of February, and one dot at the end of March. The number of deaths is approximately 100 for all points.

The scatter plot displays daily case counts over time. The x-axis is labeled with months: Dec, Jan, Feb, Mar, and Apr. The y-axis has major ticks at 0, 20, 40, 60, 80, and 100. A vertical dashed red line is positioned at the beginning of January. Data points are represented by black dots. In December, there are two high-value points near the top of the chart. From January through April, the data points are clustered near the bottom, indicating low daily case counts.
