The graph displays the daily number of COVID-19 cases in the United States. The data shows a period of relative stability with minor fluctuations between 10,000 and 20,000 cases from October to November 2020. Following the implementation of the vaccination campaign in December, there was a period of lower case counts, generally below 10,000. However, a massive surge occurred in early April 2021, with cases peaking at approximately 95,000 before declining again.

The graph displays the daily count of COVID-19 cases in the United States from October to April. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A red dashed vertical line is positioned at the end of November. The data shows a first wave peaking in late November, followed by a decline and then a second wave starting in January, peaking in early February with a value exceeding 20 cases, before declining again.
