The graph displays the daily count of COVID-19 cases in the United States from September to April. The y-axis, labeled 'Number of cases', ranges from 0 to 25. The x-axis shows months: Oct, Jan, and Apr. A red dashed vertical line is positioned at the end of September. The data shows a very high initial peak in late September (around 25 cases), followed by a sharp drop and then a period of fluctuation between 9 and 16 cases through January. Starting in January, the case counts begin to rise more steadily, reaching a major peak of approximately 22 cases in late March, before declining to around 10 cases by early April.

The graph displays the daily number of COVID-19 cases in the United States from September to April. The y-axis is labeled with values 1, 2, 3, and 4. The x-axis is labeled with months: Oct, Jan, and Apr. A vertical dashed red line is positioned at the beginning of the data series in late September. The data points are connected by a black line, showing a fluctuating but generally increasing trend. The number of cases peaks at approximately 4.5 in late March and then declines towards the end of the period shown.
