The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of relative stability with minor fluctuations until late December, where a massive spike occurs, peaking at approximately 95,000 cases. This is followed by a sharp drop and a secondary, much smaller peak in early January. The case counts then stabilize at a lower level through April.

The graph displays the daily count of COVID-19 cases in the United States. The x-axis is labeled with months: Oct, Jan, and Apr. The y-axis is labeled with case counts: 0, 5, 10, and 15. A red dashed vertical line is positioned at approximately January 20, 2020, indicating the date of the first case. The data shows a period of low case counts from September to early October, followed by a steady increase through November and December. A sharp peak occurs in late January/early February, reaching nearly 15 cases. After this peak, the case count drops significantly and remains relatively low with minor fluctuations through April.

The graph displays the daily number of COVID-19 cases in the Netherlands from September to April 2020. The y-axis represents the number of cases, ranging from 0 to 15. The x-axis represents time, with labels for October, January, and April. A vertical dashed red line indicates the start of the lockdown in March. The data shows a period of low case counts in September and October, followed by a significant increase in November and December, peaking at approximately 14 cases in late March. After the lockdown, there is a sharp decline in cases, followed by a period of relative stability with minor fluctuations.
