The graph displays the daily count of COVID-19 cases in the United States. The y-axis is logarithmic, with major ticks at 100,000 and 1,000,000. The x-axis spans from October to April. A red dashed line indicates the start of the data series in late December. The data shows a significant peak in early January, exceeding 1,000,000 cases, followed by a period of relative stability and then a gradual increase through April.

The graph displays the daily number of COVID-19 cases in the United States. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A red dashed vertical line is positioned at the beginning of December 2020. The data shows a period of fluctuating case counts between October and November, followed by a sharp increase in December, peaking at over 20 cases in early January. After this peak, the number of cases drops significantly and remains relatively low through April.
