The graph displays the monthly evolution of the number of COVID-19 cases in the Île de France region from October 2025 to July 2026. The y-axis represents the number of cases, ranging from 0 to 10,000. The x-axis shows the timeline with labels for Oct 2025, Jan 2026, Apr 2026, and Jul 2026. The data shows a highly volatile trend with a significant peak in late 2025, followed by a decline and then a resurgence in early 2026, peaking again in late 2026.

The graph displays the monthly variation of the number of COVID-19 cases in the Republic of Serbia. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows the months from Oct 2023 to Jul 2024. The data shows a significant peak in late 2023, followed by a decline and then a sharp increase in early 2024, peaking again in late 2023 and early 2024.

The graph displays the monthly evolution of COVID-19 cases in the Île de France region. The y-axis represents the number of cases, with major grid lines at 0, 20,000, 40,000, 60,000, 80,000, and 100,000. The x-axis shows the timeline from October 2025 to July 2026. The data shows a high level of volatility with several peaks. A notable peak occurs in late 2025, reaching nearly 100,000 cases. This is followed by a period of decline and fluctuation. A sharp increase begins in early 2026, reaching another peak of approximately 90,000 cases in late 2026, before showing a slight downward trend in the final months of the period shown.
