The graph displays the daily number of COVID-19 cases in the United States from September to April. The y-axis represents the number of cases, ranging from 0 to 1,000,000. The x-axis shows months from Oct to Apr. A vertical dashed red line marks the start of the second wave in late December. The graph shows a sharp increase in cases starting in late December, peaking in early January, and then declining.

The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled 'Number of cases' and ranges from 0 to 10,000 in increments of 2,000. The x-axis shows the months from October to April. A vertical dashed red line is positioned at the beginning of March, indicating the start of the nationwide lockdown. Before the lockdown, the number of cases shows a clear upward trend, starting from around 2,000 in late September and reaching a peak of nearly 10,000 in early March. Following the lockdown, there is a sharp decline in cases, with the number dropping to below 2,000 by mid-March and remaining relatively stable at a low level through April, with only a few minor fluctuations.

The graph displays the daily number of COVID-19 cases in the United States. The y-axis is labeled 'Number of cases' and ranges from 0 to 100,000. The x-axis shows the timeline from October to April. A red dashed vertical line at approximately November 20, 2019, indicates the 'lockdown' period. The data shows a major peak in early September, followed by a period of relative stability with minor fluctuations. Post-lockdown, the case count drops significantly and remains at a low level with a small secondary peak in late March.

The graph displays the daily count of COVID-19 cases in the United States. The data begins in late September, indicated by a vertical dashed red line. The case count remains relatively low and stable, fluctuating between approximately 10,000 and 30,000 cases per day through March. In early April, there is a dramatic spike, with the number of cases reaching nearly 100,000 before dropping back down to the previous level.

The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled 'Number of cases' and ranges from 0 to 20. The x-axis shows months from September to April. A vertical dashed red line is positioned at the beginning of March, indicating the start of the lockdown. The data shows a period of low case counts from September to early March, followed by a sharp increase in cases, peaking at approximately 20 cases in early March. After the lockdown, the number of cases drops significantly and remains relatively low through April.
