B530-A-% rCV

The line plot displays the daily number of COVID-19 cases in the United States from August 1, 2020, to April 1, 2021. The x-axis represents time, with labels for October, January, and April. The y-axis represents the number of cases, with a scale from 0 to 1,000,000. The plot shows a significant increase in cases starting in late August, peaking in early September at approximately 1,000,000 cases. This is followed by a period of fluctuation with a major peak in late October at approximately 800,000 cases. A second, smaller peak occurs in late February at approximately 200,000 cases, followed by a decline and then a slight increase in April. Two vertical dashed red lines mark the dates of the first and second waves.
