The graph displays the percentage of relative coefficient of variation (%rCV) over a period from October 2025 to July 2026. The y-axis is labeled '%rCV' and ranges from 0 to 9. The x-axis shows months, with labels for Oct 2025, Jan 2026, Apr 2026, and Jul 2026. The data is plotted as a green line with black dots, and several red squares are placed at specific data points. The values start around 6-7% in late 2025, fluctuate, and then show a significant peak near 10% in early 2026. Following this, the values generally decrease, with another notable peak near 8% in mid-2026, before settling into a range of 2-4% by July 2026.

The graph displays the percentage of relative coefficient of variation (%rCV) over time. The x-axis represents time from October 2025 to July 2026, with major ticks every three months. The y-axis represents %rCV, ranging from 2.5 to 10.0 with increments of 2.5. The data is plotted as a green line with circular markers. A significant peak is observed in early 2026, reaching a value of 10.0. Several data points in the initial period (October 2025) are highlighted with red squares, indicating values between 6.0 and 7.5. The overall trend shows high variability with frequent fluctuations between 2.5 and 5.0.
