The graph displays the daily count of COVID-19 cases in the United States. The y-axis is on a logarithmic scale, with major ticks at 100,000 and 1,000,000. The x-axis spans from October to April. A red dashed vertical line is positioned at the end of December. The data shows a significant peak in early January, exceeding 1,000,000 cases, followed by a period of relative stability and then a slight upward trend towards the end of the period shown.

The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of relative stability and low case counts from October through mid-November. Following this, there is a period of increasing case counts, peaking at over 20 cases in late December. After this peak, the number of cases drops sharply and remains at a low level, with minor fluctuations, through April. A red dashed vertical line is positioned at approximately November 15th, likely indicating a specific point of interest or intervention.
