The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 20,000, 40,000, 60,000, 80,000, and 100,000. The x-axis is labeled with months: Oct, Jan, and Apr. A vertical dashed red line is positioned at the end of December. The data shows a period of relative stability with minor fluctuations until late December, followed by a massive spike in early January that peaks at approximately 95,000 cases. After this peak, the number of cases drops sharply and then shows a gradual upward trend through April, reaching about 25,000 cases by the end of the period shown.

The graph displays the daily number of COVID-19 cases in the Netherlands. The first wave begins in late September, peaks at approximately 14 cases in late November, and then declines. A vertical dashed red line indicates the start of the second wave in late November. The second wave begins in early December, peaks at over 20 cases in early January, and then declines. The x-axis is labeled with months: Oct, Jan, and Apr. The y-axis is labeled with case counts: 0, 5, 10, 15, and 20.
