The graph displays the monthly variation of the number of COVID-19 cases in the Republic of Serbia. The x-axis represents time, with labels for Oct 2025, Jan 2026, Apr 2026, and Jul 2026. The y-axis represents the number of cases, with a scale from 0 to 1000. The data shows a very high peak in early 2025, reaching nearly 1000 cases. This is followed by a sharp decline to around 200 cases by mid-2025. The number of cases then fluctuates between 200 and 400 for the remainder of the period shown, with a notable dip in early 2026 and another sharp decline in mid-2026.

The graph displays the daily number of COVID-19 cases in the United States. The x-axis represents time, with labels for Oct 2025, Jan 2026, Apr 2026, and Jul 2026. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a significant peak in late 2025, reaching nearly 100,000 cases, followed by a sharp decline and subsequent fluctuations between 10,000 and 30,000 cases. There are several smaller peaks, notably in early 2026, mid-2026, and late 2026.

The graph displays the daily number of COVID-19 cases in the United States over a period from October 2025 to July 2026. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows time in months, with labels for Oct 2025, Jan 2026, Apr 2026, and Jul 2026. The data is plotted as a dark red line with circular markers at each data point. A prominent feature is a sharp spike in late October 2025, reaching nearly 100,000 cases, marked with a red square. Another red square is placed on the line just below this peak. The line shows significant volatility, with several smaller peaks and troughs throughout the period. A notable dip occurs in late July 2026, where the number of cases drops sharply to near zero.
