The figure is a line plot with blue data points and a black line connecting them. The x-axis is labeled with dates: Jul 2025, Oct 2025, Jan 2026, and Apr 2026. The y-axis has a grid with major ticks every 20,000 units, from 0 to 100,000. The data points are mostly clustered around the 50,000 mark on the y-axis. There are several sharp downward spikes: one in early January 2026 reaching about 10,000, another in mid-January 2026 reaching about 5,000, and two in early March 2026 reaching about 10,000. A major upward jump occurs in late February 2026, where the value increases from 50,000 to nearly 100,000. After this jump, the data points remain mostly near 100,000, with some minor fluctuations and a few small downward spikes.
