The graph displays the daily count of COVID-19 cases in the United States over a 10-month period. The y-axis represents the number of cases, ranging from 0 to 100,000 in increments of 20,000. The x-axis marks time with labels for Jul 2025, Oct 2025, Jan 2026, and Apr 2026. The data shows extreme volatility, with several major surges. The most prominent peak occurs in late 2025, reaching approximately 95,000 cases. Another significant surge is seen in early 2026, peaking at about 70,000 cases. Following these peaks, there is a period of relative stability around 20,000 cases, followed by a sharp decline starting in early 2026, eventually leveling off near zero by April 2026.

The chart displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 3, 4, 5, and 6. The x-axis has major ticks for Jul 2025, Oct 2025, Jan 2026, and Apr 2026. The data shows a period of high case counts (mostly between 4 and 6) from July 2025 through late January 2026, with several sharp drops and recoveries. Starting in early February 2026, there is a very rapid and significant decline in case counts, falling below 3 by mid-February and remaining low through April 2026.
