The graph displays the daily number of COVID-19 cases in the Netherlands. The y-axis is labeled 'Number of cases' and ranges from 0 to 10,000 in increments of 2,000. The x-axis shows the months from October to April. A vertical dashed red line is positioned at the beginning of March, indicating the start of the nationwide lockdown. The data shows a very high initial peak in late September, followed by a period of relative stability with minor fluctuations. A significant peak occurs in late October, reaching nearly 10,000 cases. Following the lockdown in March, the number of cases drops sharply and remains at a low level, with a small secondary peak in late March.
