The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of low case counts from late September through late December. A major surge begins in early January, peaking at approximately 95,000 cases. Following this peak, the case count drops sharply and remains relatively stable, fluctuating between 10,000 and 20,000 cases through April.

The graph displays the daily number of COVID-19 cases in the Netherlands. The x-axis is labeled with months: Oct, Jan, and Apr. The y-axis ranges from 0 to 20. A red dashed vertical line is positioned at approximately November 20, 2019. The data shows a significant increase in cases starting around late October, peaking at nearly 20 cases in late November, followed by a sharp decline. A second, much larger wave begins in late December, peaking at over 20 cases in late March/early April, and then gradually declining towards the end of the period shown.
