The graph displays the daily number of COVID-19 cases in the United States from September to April. The y-axis represents the number of cases, with major grid lines at 0, 10, 15, and 20. The x-axis shows the months of October, January, and April. A vertical dashed red line is positioned at the beginning of the data series in late September. The data shows a period of fluctuation with peaks around 12-14 cases in late September and early October, followed by a sharp decline to near-zero cases in late October. A significant spike occurs in early January, reaching over 20 cases, followed by a period of low case counts and minor fluctuations through April.
