The chart displays the daily count of COVID-19 cases in the United States over a period from October 2025 to July 2026. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows time in months, with labels for Oct 2025, Jan 2026, Apr 2026, and Jul 2026. A prominent spike occurs in late October 2025, reaching nearly 100,000 cases. Following this, the case count remains relatively low, generally below 10,000, with some minor fluctuations and a small secondary peak in early 2026.

The chart displays the daily count of COVID-19 cases in the United States over a period from late October 2025 to late July 2026. The y-axis represents the number of cases, ranging from 0 to 100,000 in increments of 20,000. The x-axis marks time in months, with labels for Oct 2025, Jan 2026, Apr 2026, and Jul 2026. The data shows a very high initial peak of approximately 90,000 cases in late October 2025. Following this, the case count drops significantly and remains relatively low, generally staying below 10,000 cases per day. There are several smaller, isolated spikes throughout the period, notably around January 2026, April 2026, and June 2026, but none reach the magnitude of the initial peak. The overall trend is one of low, fluctuating case counts after the initial surge.

The chart displays the daily count of COVID-19 cases in the United States. The x-axis represents time, with labels for Oct 2025, Jan 2026, Apr 2026, and Jul 2026. The y-axis represents the number of cases, with a scale from 0 to 100,000. A prominent spike occurs in late October 2025, reaching approximately 100,000 cases. Following this, the case count remains relatively low, generally below 10,000, with several smaller peaks, notably one in late November 2025 and another in late May 2026.
