The scatter plot displays the number of deaths over time. The y-axis represents the number of deaths, ranging from 0 to 100 in increments of 20. The x-axis represents time, with labels for October, January, and April. The data points are black dots. There are two vertical dashed red lines around October and one around January. The data shows a high number of deaths (around 90) in the early period, followed by a sharp decline to near zero by October. There are two vertical dashed red lines around October and one around January. The data points are black dots.

The scatter plot displays the daily death toll in the United States. The y-axis is labeled with values 0, 20,000, 40,000, 60,000, 80,000, and 100,000. The x-axis is labeled with months: Oct, Jan, and Apr. A red dashed horizontal line is positioned at the 100,000 mark. Data points are concentrated in the first half of the plot (September to October), with a peak near 100,000 deaths per day. A large gap in data points occurs between late October and early April, where the death toll is zero. A few isolated data points are visible in late April, showing a slight increase in deaths.
