The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled 'Number of cases' and ranges from 0 to 1,000,000 in increments of 200,000. The x-axis is labeled 'Date' and shows months from Oct to Apr. A vertical dashed red line is positioned at the start of the data series. The data points are connected by a solid black line, showing a sharp peak in early January followed by a decline and then a gradual increase towards the end of the period.

The graph displays the daily count of COVID-19 cases in the United States. The vertical axis (y-axis) is scaled from 0 to 1,000,000 in increments of 200,000. The horizontal axis (x-axis) spans from late September to early April, with labels for October, January, and April. A vertical red dashed line is positioned at approximately September 25th. The data series begins with a peak of about 800,000 cases in early October, followed by a sharp drop and a period of low activity. A major surge occurs in late January, peaking at approximately 950,000 cases, before declining and showing continued fluctuations through April.
