The graph displays the daily count of COVID-19 cases in the United States from October to April. The x-axis represents time, with labels for October, January, and April. The y-axis represents the number of cases, with a grid line at 100,000. The data shows a general upward trend with significant daily fluctuations. A major peak occurs in early April, where the number of cases exceeds 100,000.

The graph displays the daily count of COVID-19 cases in the United States from October to April. The x-axis represents time, with labels for Oct, Jan, and Apr. The y-axis represents the number of cases, with a scale from 0 to 100,000. The data shows a period of low activity from October through late January, followed by a rapid and significant increase in cases. The peak occurs in early April, reaching nearly 100,000 cases, before showing a downward trend.

The graph displays the daily number of COVID-19 cases in the United States from October to April. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows the months from October to April. The data shows a period of low case counts in October and November, followed by a sharp increase in December, peaking at approximately 100,000 cases. This is followed by a decline and then a gradual increase in January and February, peaking again at approximately 100,000 cases. A significant peak occurs in early April, reaching over 100,000 cases, followed by a sharp decline and then a gradual increase towards the end of the period.
