The graph displays the daily number of COVID-19 cases in the United States from October to April. The y-axis represents the number of cases, ranging from 0 to 100,000. The x-axis shows the months from October to April. A vertical dashed red line is drawn at the end of December, indicating the point where the number of cases began to decline significantly. The data shows a sharp increase in cases starting in late December, peaking in early January, and then declining.

The graph displays the daily number of COVID-19 cases in the Netherlands. The x-axis is labeled with months: Oct, Jan, and Apr. The y-axis shows the number of cases, ranging from 0 to 15. A red dashed vertical line is positioned at approximately November 15th, indicating the start of the second wave. The first wave peaks at about 12 cases in late November. The second wave is significantly larger, peaking at 15 cases in late March. The data points are connected by a solid black line, and each point is marked with a black dot.

The graph displays the daily number of COVID-19 cases in the United States from October to April. The y-axis represents the number of cases, with major grid lines at 7.5, 10.0, 12.5, and 15.0. The x-axis shows the months from October to April. A red dashed vertical line is positioned at the end of December, indicating the start of the second wave. The data shows a period of low case counts from October through late December, followed by a sharp increase starting in early January, peaking at approximately 15.0 cases in early February. After a decline, there is a second, smaller peak in late February/early March, followed by a decline towards the end of the period.

The graph displays the daily number of COVID-19 cases in the United States. The y-axis is labeled 'Number of cases' and ranges from 0 to 100,000 in increments of 20,000. The x-axis is labeled 'Date' and shows months from Oct to Apr. A red dashed vertical line is positioned at the beginning of November 2020, indicating the start of the vaccination campaign. The data shows a period of relative stability with minor fluctuations until late March/early April 2021, when there is a sharp, massive increase in cases, peaking at approximately 95,000.

The graph displays the daily count of COVID-19 cases in the United States. The data begins in early November, indicated by a red dashed line. The case count fluctuates between approximately 5 and 15 cases through December and January. A major surge occurs in late March, with cases peaking at over 20. Following this peak, the case count drops sharply and remains relatively low, fluctuating between 5 and 8 cases through April.
