The graph displays the daily count of COVID-19 cases in the United States. The y-axis is on a logarithmic scale, with major ticks at 100,000 and 1,000,000. The x-axis spans from October to April. A vertical dashed red line is positioned at the beginning of the data series in early November. The data shows a period of fluctuation between approximately 100,000 and 500,000 cases from November to early January. A massive spike occurs in early January, peaking at over 1,000,000 cases. Following this peak, the case count drops sharply and remains relatively low, fluctuating between 100,000 and 200,000 cases through April.

The graph displays the daily count of COVID-19 cases in the United States. The data shows a period of low case counts from late September through early December. Starting in late December, there is a rapid increase in cases, peaking at approximately 21 cases in early January. Following this peak, the case counts drop sharply and remain relatively low, fluctuating between 1 and 8 cases through April. A vertical dashed red line is positioned at the end of December to indicate the onset of the lockdown.
