The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled 'Number of cases' and ranges from 0 to 100,000 in increments of 20,000. The x-axis is labeled 'Date' and shows months from Oct to Apr. A vertical red dashed line is positioned at approximately October 28, 2020. The data series begins at this point with a value of about 15,000 cases. It shows a period of relative stability with minor fluctuations until late December, when the case count begins to rise. A massive spike occurs in early January 2021, reaching a peak of approximately 105,000 cases. Following this peak, the case count drops sharply and remains relatively low, fluctuating between 10,000 and 20,000 cases through April 2021.

The graph displays the daily count of COVID-19 cases in the United States. The y-axis is labeled with values 0, 10, 15, and 20. The x-axis is labeled with months: Oct, Jan, and Apr. A red dashed vertical line is positioned at the end of December. The data shows a first wave peaking in late December at approximately 14 cases. A second, much larger wave begins in early January, peaking at over 20 cases. Following this peak, the case count drops sharply and remains relatively low, fluctuating between 2 and 8 cases through April.
